

The Command Centre

CSM Onboarding Guide

Welcome to the team. This guide walks you through every part of the Command Centre — the main screen you'll use every day to manage your clients' ad campaigns. Read it once end to end. Keep it around for later.

If something on screen doesn't match what this guide says, trust the dashboard — we ship updates often. Ask your lead if a step feels off.

Contents

- 01** What is the Command Centre?
- 02** Getting signed in
- 03** The sidebar — your home base
- 04** Dashboard — the big picture
- 05** Manager View and Pod View
- 06** Account Detail — your main work page
- 07** Productivity Mode — your daily queue
- 08** Billing Tracker
- 09** Automations
- 10** Manage (Admin)
- 11** Common problems — what they mean and what to do
- 12** Glossary — words you'll hear a lot
- 13** Common workflows — quick reference

01 What is the Command Centre?

The Command Centre is the main screen you'll use to do your job. It shows every client's ad campaign in one place.

What you see here

- How much money is being spent on each client's ads.
- How many leads are coming in.
- How many of those leads booked an appointment.
- Which clients are doing great and which ones need help.
- When a cycle ends and a client is ready to be billed.

What your job looks like

You're the person clients talk to. You keep their campaigns on track. You spot problems before they get bad. You explain what's happening when a client asks.

Day to day, that means:

- Check each of your clients once a day. See how the numbers are trending.
- Find the bottleneck when something isn't working — are leads low, or is the ad cost too high, or are the leads out of the service area?
- Talk to your clients about what you see and what you're doing about it.
- Start new cycles on time. Close old cycles so we can bill.
- Flag any client who might cancel to your lead early.

Tip — The Command Centre is your single source of truth

Numbers update live. If you want to know what's going on with a client, open the Command Centre first. You almost never need to look anywhere else.

02 Getting signed in

It's quick. Three steps.

- Open the Command Centre link your lead sends you on day one.
- Click **Sign in with Google**.
- Pick your **@roofignite.com** email.

That's it. You stay signed in for 30 days on that computer. You'll see your name at the bottom of the sidebar when you're in.

Heads up — Personal Gmail won't work

Only **@roofignite.com** emails can sign in. If you get stuck at the login screen, message your lead and they'll check your account.

03 The sidebar — your home base

The sidebar is the menu on the left. It's on every page. Here's what each item is for, top to bottom.

Sidebar items
Quick Jump Start typing a client's name. Pick it. It takes you straight to their page. This is the fastest way to get anywhere. Use it a lot.
Dashboard The big-picture view of every client at the company.
Managers A list of every account manager. Click one to see their clients.
Billing Tracker The invoice pipeline. Shows cycles ready to bill, billed, late, and so on.
Productivity Mode Your daily to-do queue. It picks the client with the worst health for you to work on next. No tab-hopping.
Creative Queue Where creative requests and ad assets are tracked. Your creative lead will walk you through this — it's not covered here in detail.
Automations Turn Slack alerts on and off. Run reports by hand.
Manage Add new clients and managers. Change settings.

At the bottom of the sidebar

- **A green or yellow dot** — shows if the data is fresh. Yellow while it's loading, green when done.
- **Refresh Data** — click this to pull the newest numbers if you just changed something in the sheet and want to see it now.
- **Your name and email** — plus a sign-out button.

04 Dashboard — the big picture

This is the first page you see. It answers one question: **how is the whole company doing right now?**

The four cards at the top

- **Accounts** — how many clients we have (active, paused, total).
- **Account Health** — how many clients are healthy (green) vs. in trouble (red). A bar shows the split.
- **Lead → Booked** — out of all the leads we got, what % booked an appointment? This is our company-wide booking rate.
- **Monthly Budget** — how much total money is being spent across every active client's ads this month.

Manager cards and Pod cards

Below the top row you'll see cards for each manager and each pod. Each card shows that group's rollup — leads, spend, booked, CPA, book rate, health bar.

Click any card to zoom in on that manager or pod.

Tip — How to scan the dashboard in 30 seconds

Look at the Account Health bar first. If it's mostly green, you're fine. Then scan the manager cards for anyone with a red health bar. That's where to start your day.

05 Manager View and Pod View

These two pages look the same. The only difference is what's shown — Manager View shows one manager's clients, Pod View shows one pod's clients. You'll mostly use Manager View because your clients are grouped under you.

What's on the page

- **Alerts banner at the top.** If any of your clients are off track, they show up here in red with a quick reason. Click a row to jump to that client. If everything's fine, you get a green "all clear" banner.
- **Account table.** A row for each client, worst health on top. This makes problems float up so you see them first.

Reading the account table

The columns are color-coded so you can scan fast. Here's what each one means:

HP	Health Score. 0 to 100. Green is good. Red needs help.
FTG	Fatigue Score. How tired the audience is of seeing the ad. Red means people have seen it way too many times.
L2B	Lead-to-Booked rate over the last 45 days. What % of leads turned into appointments.
OSA%	Out-of-Service-Area %. The share of leads that came in but live outside the client's service area — we can't serve them. High OSA = we're wasting ad spend.
CPA	Cost per booked appointment. Green means we're under the client's goal. Red means over.
Pace	Are we on track to hit the booked goal by the end of the cycle? Up arrow = behind, dot = on pace.
Freq	Frequency. How many times the average person has seen the ad. Over 2.5 is a warning.
Track	Overall on-track badge. Green check = good, yellow = close, red X = off track.

Click any row to open that client's page. That's where you'll do the real work.

06 Account Detail — your main work page

This is the most important page in the tool. Everything about one client lives here — their numbers, their goals, their ads, their cycles. You'll open this page dozens of times a day.

How to read this page top to bottom

Think of the page as a funnel — ad spend goes in at the top, booked appointments come out the bottom. Your job is to find where things are breaking down.

1. The header

You'll see two big colored badges — **HP** (Health Score) and **FTG** (Fatigue Score). Green is good, red needs attention. Below that: the client's name, whether they're Active or Paused, their manager, their pod, and their ad account ID.

2. Action buttons in the top right

What each button does
Edit Cycle Change the current cycle's goals or budget. Opens a form filled in with the current numbers — change what you need and save.
Change Meta ID If the client's ad account ID changed, put the new one here. The tool will use the new ID from this cycle forward and keep the old ID on past cycles so old reports still work.
Add Cycle Start a new 28-day cycle when the old one ends. Pick the daily budget and booked goal; other numbers carry over from the last cycle.
Creative Forge Opens the AI tool for making new ad creative. Your creative lead will show you this.
Offboard Client Remove a client when they cancel. Always check with your lead before you click this — it's not easy to undo.

3. The Track Status banner

Right below the header is a big colored bar. It tells you in one glance: On Track, Close, Off Track, or No Data Yet.

It shows booked appointments so far, the goal, days left in the cycle, and a progress bar. The bar has a dashed line showing how far through the cycle we are. **If the solid bar is behind the dashed line, we're behind.** That's your cue to dig into why.

4. The five KPI cards (where the bottleneck lives)

These five cards in a row tell you exactly where your client's funnel is breaking down. Read them left to right:

Total Leads	How many leads we got this cycle. Is it enough? Compare to past cycles.
Est. Booked	Based on the current pace, how many appointments will we end the cycle with?
CPA	How much each booked appointment costs. Shows next to the goal. Green = under goal, red = over.
Spent / Budget	How much of this month's budget we've spent so far.
OSA / Freq	OSA = what % of leads were out of service area. Freq = how many times the average person saw the ad. Freq over 2.5 is a red flag.

Quick bottleneck cheat sheet

Few leads, good CPA: spend is too low. Increase budget.

Lots of leads, bad CPA: ad or audience is off. Check creative and targeting.

Leads are coming in but OSA is high: ad is running in the wrong area. Fix the targeting map.

Good CPA, few bookings: it's not an ad problem — the client's call team is losing the leads. Flag this to the client.

5. Lead-to-Booked and Greg Guardrails

Two cards side by side.

- **L2B (45 days)** — of the leads we got in the last 45 days, how many booked? This is a good health check on the client's call team.
- **Greg Guardrails** — Greg is our auto-buyer. He watches how much each click and each lead costs. When they get too expensive, Greg either pauses the ad (**HARD**), pings Slack to warn you (**SOFT**), or does nothing (**OFF**). You can change Greg's mode for this client right from this card.

6. The ads section

- **Filter bar:** pick a campaign, an ad set, and a date range. Only B2C campaigns show up — B2B is filtered out on purpose.
- **Daily chart:** shows how spend, leads, clicks, cost per click, and other numbers have moved over time. Great for spotting trends.
- **Ads grid:** every ad shown as a row with its picture, spend, leads, and cost per lead. Sorted by spend. You can pause or turn on any ad from here.

Heads up — Pausing an ad happens right away

When you click the pause toggle, the ad stops running in the ad platform right then. There's no undo button — you'd have to click the same toggle again to turn it back on. Before pausing a high-spend ad, be sure it's actually underperforming and not just noisy for a day or two.

7. Cycle history and billing

Scroll down and you'll see every past cycle listed in a table — dates, leads, booked, CPA, spend. Each row has **Good to Bill** and **Billed** toggles. When a cycle finishes, flip Good to Bill to tell the billing admin it's ready to invoice.

07 Productivity Mode — your daily queue

Productivity Mode is your "work the list" screen. It picks one client for you to focus on — the one with the worst health — and keeps you from bouncing between tabs.

How to use it

- Pick your name from the dropdown at the top.
- Click **NEXT ACCOUNT**. The cards spin and land on a client.
- Click **Go to Account** to open that client's page.
- Do the work — check their numbers, review their ads, make any changes.
- Come back and click **I'M DONE — NEXT ACCOUNT** to move to the next one.

Breaks

Two 15-minute breaks are built into your day. When a gold "15 MIN BREAK" card comes up, take it. Get coffee. Come back fresh.

Tip — The "done today" list resets at midnight

Your progress is saved on the computer you're using. If you switch computers in the middle of the day you'll start over. If you mess something up, click **Reset Queue** at the top to start your list over.

08 Billing Tracker

The Billing Tracker is the invoice pipeline. Every cycle ever, sorted into buckets by status. You'll use this to know what's ready to invoice, what's late, and what failed.

The buckets, top to bottom

What each bucket means
Upcoming Cycles ending within the next 7 days. Not ready to bill yet — but good to know they're coming so you can prep the client.
Ready to Bill Good to Bill is on, Billed is still empty. These are your action items. Invoice them out.
Late Ended 0–7 days ago. Still not billed. Gentle reminder.
Overdue Ended more than a week ago. Still not billed. Sorted most-overdue first. Red flag zone — these need attention today.
Retry Something went wrong. The cycle is flagged for another billing attempt.
Failed Invoice went out but payment didn't go through. Decide what's next — try again, chase the client, or write it off.
Billed Done and paid. Shown for reference.
Lost Written off. Kept in history for reporting. You can Undo if it was marked by mistake.

Buttons on each row

- **Good to Bill** — the numbers are final, send the invoice. Pings the billing admin in Slack.
- **Billed** — invoice sent and paid.
- **Failed** — invoice went out but payment failed.
- **Try Again** — send back for another attempt.
- **Lost** — write-off.

Tip — Retainers add themselves up

The invoice total on each row calculates from the billing notes. Write the retainer as "**\$2000 + 15%**" and it'll add the base plus 15% of ad spend for you. Keep the format consistent or the total will go blank.

09 Automations

Two things live here: **notification toggles** and **manual report runs**.

Notification toggles

Each row is a manager. Each column is a type of Slack alert. Flip a toggle off to stop that manager from getting that alert.

Audit	A rollup of account performance. Most people leave this on.
Pace	Booking pace alerts — on-track, close, or behind.
Greg	Greg pings when he pauses an ad or hits a guardrail.
Cycle Warn	Warnings about cycles ending, being extended, or missing data.
Billing Auto	Good to Bill / Billed / Failed notifications. These are always on — you can't turn them off.

Run reports by hand

Each manager has four buttons: Audit, Pace, Greg, Cycle Warnings. Click one and that report runs right then for that one manager and posts to Slack. Use this when you need a snapshot mid-week.

Tip — If nothing is working on this page

Look for a yellow banner at the top. If it says "Apps Script not connected," the connection to our records is missing. Your lead can fix it in **Manage** → **Settings**.

10 Manage (Admin)

Manage is where you add clients, add managers, and change settings. It has two tabs: **Clients** and **Settings**.

Clients tab — the buttons at the top

What each button does
New Client Add a new client. You'll need their name (must match the logbook exactly), pick a manager — the pod is picked automatically from the manager — paste the ad account ID, and set the booked goal, daily budget, and cycle start date.
New Mgr Add a new manager.
Transfer Move a client from one manager to another.
Pod Settings Add a new pod or remove one. Talk to your lead before you touch this.
Refresh Data Pull the newest numbers from our records.
Apps Script Settings The tech connection. Your lead handles this — you won't need to touch it.

Greg Control Center

A card for each manager. Each card has two toggles: **CPC** (cost per click) and **CPL** (cost per lead). For each, you pick **HARD**, **SOFT**, or **OFF**:

- **HARD** (green) — Greg pauses the ad automatically when the cost crosses the line.
- **SOFT** (yellow) — Greg sends you a Slack ping but doesn't pause anything. You decide.
- **OFF** (dark) — Greg does nothing.

Setting Greg's mode here is the default for every client under that manager. If you need to override it for one specific client, you can do that from the client's own page.

Client table

A searchable list of every client. Search by name, filter by status or manager, and click in to open any client. You can also flip their Greg modes and change their manager right from this table.

Settings tab

Most of this is set up once and forgotten.

- **Slack Connection** — where alerts post. Channels for B2C and B2B.
- **Slack User IDs** — one row per manager, so @-mentions work.
- **Billing Admin** — who gets the "Good to Bill" ping.
- **Apps Script Connection** — the tech link. Your lead handles this.

11 Common problems — what they mean and what to do

This section is about things going wrong with the dashboard itself — data not loading, numbers that look frozen, saves that don't stick. It's not about media buying.

Command Centre and Meta Ads work together

The Command Centre gives you the overview. **Meta Ads Manager** has the nitty-gritty. Use them side by side. If something on the dashboard looks wrong or just feels off, **always open Meta Ads in another tab to double-check**. Meta is the source of truth for spend, impressions, clicks, and ad status. The dashboard pulls that data in and summarizes it — but it can lag, cache old copies, or miss things. Meta doesn't.

Before you report a problem, try this

- Click **Refresh Data** at the bottom of the sidebar.
- Hard-refresh the browser (**Ctrl+Shift+R** on Windows, **Cmd+Shift+R** on Mac). This clears the saved copy of the page.
- Open Meta Ads and check the same number there. If Meta is right and the dashboard is wrong, it's almost always a sync delay.
- If the fix doesn't take after all three, ping your lead with a screenshot and the client name.

Data not loading or looking frozen

When the numbers look stale or wrong

A client you manage isn't in the sidebar or Quick Jump.

What it usually means: the page loaded with a saved copy from before the client was added. Or the sheet row for them got moved around.

What to do: click **Refresh Data**. Hard-refresh the page. If they still don't show up, check with your lead that the client's row is in the right pod tab.

A whole pod is missing from the sidebar, or shows up with no clients.

What it usually means: the list of pods didn't load this time. Usually a temporary hiccup.

What to do: hard-refresh. If it still won't load, it's probably a connection issue — tell your lead.

Numbers haven't moved all day.

What it usually means: you're looking at a saved copy from when you opened the tab.

What to do: click **Refresh Data**. If the numbers still don't move, open Meta Ads — if Meta is live and moving, the dashboard is stuck. Hard-refresh.

A cycle you just added isn't showing up.

What it usually means: same thing — the dashboard is showing what it already loaded.

What to do: **Refresh Data**, then reopen the account page.

A budget or goal you just changed isn't showing the new value.

What it usually means: your save might have gone through but the display is stale. Or the save warned you "Updated locally" (see next section).

What to do: **Refresh Data**. If the new value shows up, you're good. If not, check for the "Updated locally" warning.

Meta ads section looks wrong

When the ads grid, chart, or toggles misbehave

Ads grid is empty for a client who definitely has running ads.

What it usually means: the dashboard couldn't reach the ad platform, or the ad account ID on file is wrong. Only ads in active B2C campaigns show up — B2B and paused campaigns are hidden on purpose.

What to do: first, open Meta Ads and confirm the ads are actually running there. If they are, check the Ad Account ID shown at the top of the dashboard — does it match what's in Meta? If it doesn't, fix it with **Change Meta ID**.

Zero spend, zero impressions across every client.

What it usually means: the connection to Meta is broken for everyone — likely an expired token or a credential that needs to be refreshed.

What to do: verify in Meta Ads that spend is happening. Tell your lead — this is a setting they need to fix. Your view of ad data won't come back until it's renewed.

Ad thumbnails are missing or show broken images.

What it usually means: Meta didn't send the creative image this time around.

What to do: refresh the page once. If the thumbnails still don't load, it's cosmetic only — all the numbers are still real. Move on.

You clicked the pause toggle on an ad and it didn't change.

What it usually means: the command reached Meta but the dashboard didn't get the confirmation back, or the toggle didn't reach Meta at all.

What to do: open Meta Ads and check the ad's status there. If Meta shows it paused, you're fine — the dashboard just didn't update. If Meta shows it still active, try the toggle again.

A number on the dashboard disagrees with Meta (CTR, frequency, spend).

What it usually means: the dashboard's copy of the data is behind Meta. The dashboard pulls numbers every few minutes, not in real time.

What to do: trust Meta. Wait a few minutes and refresh. If the gap is big (more than a few %) and won't close, tell your lead.

Saves and changes not sticking

When what you just did isn't holding

You see a yellow toast that says "Updated locally. To sync: redeploy Apps Script (New Version)."

What it usually means: the backend connection is running an older version and doesn't know about the action you tried. Your change is in the browser but not yet in the shared records.

What to do: tell your lead — they need to redeploy the connection. Don't keep making changes on that page until it's fixed.

You flipped a toggle (Good to Bill, Greg mode, notification, etc.) and it flipped back on refresh.

What it usually means: the click didn't reach the records — network blip, or the same kind of backend issue as above.

What to do: refresh and try again. If it still won't stick, it's likely a connection issue. Flag your lead.

You edited a cycle's budget or goal and the cycle history still shows the old number.

What it usually means: one of two things — the save didn't go through, or the dashboard is showing a saved copy of the old data.

What to do: Refresh Data. If the new number appears, your save worked and it was just a display issue. If it doesn't, the save failed — try again.

The "Change Meta ID" button saved but Meta numbers still show the old ad account.

What it usually means: the ID changed on the current cycle but the page is still pointing at old data.

What to do: leave and re-open the account. The page rebuilds with the new ID. Confirm against Meta Ads.

Account shows wrong info

When a client's details look off

A client is showing under the wrong manager or pod.

What it usually means: they were moved recently and the dashboard didn't catch up, or the Transfer didn't finish.

What to do: Refresh Data. If the wrong manager is still showing, check Manage → Clients tab and look at their row. You can fix it inline there or use Transfer again.

Ad Account ID shows "N/A" but the client has ads running.

What it usually means: the ID was never filled in, or was cleared by mistake.

What to do: grab the ID from Meta Ads Manager (the number in the URL or in the account name). Open the client → **Change Meta ID** → paste it in. Keep the default "current cycle and forward" option.

HP or FTG score shows "—" instead of a number.

What it usually means: not enough data yet to rate the account. Happens on brand-new clients or on the first couple days of a cycle.

What to do: nothing. Give it 3 to 5 days of spend. The scores will fill in.

Leads count on the dashboard doesn't match what the client sees.

What it usually means: the client name on the lead row doesn't exactly match the client's account name. The dashboard matches on name, so small mismatches (extra space, different spelling) break it.

What to do: open the shared sheet and check that the client's name is spelled identically on the lead rows and the account row. Your lead can help if you're not sure where to look.

An account appears twice in Quick Jump or the sidebar.

What it usually means: the same client exists as two rows in the records.

What to do: don't delete anything yourself. Flag it to your lead so they can merge the rows cleanly.

Login and access

When sign-in isn't cooperating

You can't sign in — you get "unauthorized" or a bounce back to the login page.

What it usually means: you're trying with a personal Gmail, or your @roofignite.com account isn't active yet.

What to do: make sure you're picking your @roofignite.com email. If you still can't get in, message your lead — they'll check your account access.

You were signed in yesterday but today it asks you to sign in again.

What it usually means: the 30-day sign-in window expired, or you cleared your browser data.

What to do: just sign in again. No data is lost.

The page loads but shows nothing after sign-in (blank main area).

What it usually means: the data hasn't loaded yet, or the browser is holding a bad copy of the page.

What to do: wait 10 seconds. If it's still blank, hard-refresh. If still blank, try a different browser or an incognito window to rule out a bad cached copy.

Weird visual stuff

Cosmetic oddities you can usually ignore

The sidebar or page layout looks different from your teammate's screen.

What it usually means: one of you has an older saved copy of the page.

What to do: hard-refresh. Both views will line up.

The ads grid shows an ad that isn't running in Meta anymore.

What it usually means: the dashboard's copy of ad status is a few minutes behind Meta.

What to do: refresh. Check Meta Ads to confirm the real status.

Colors, badges, or banners don't look right.

What it usually means: an old version of the page is still loaded. Shouldn't affect the numbers.

What to do: hard-refresh. If the weirdness stays for more than a day across refreshes, tell your lead — it might be a bug worth fixing.

A cycle that ended still looks "live" on the Track Status banner.

What it usually means: the end date has passed but the cycle wasn't marked Billed and no new cycle has started.

What to do: if the client is still running, add a new cycle. If they're not running anymore, flip Good to Bill / Billed so it closes out cleanly.

The golden rule

When in doubt, check Meta Ads. The Command Centre is the summary — Meta Ads is the receipt. If the two disagree, Meta is right until proven otherwise. Bring screenshots of both to your lead if you need help untangling a real difference.

12 Glossary — words you'll hear a lot

Pick these up as you go. The top few come up in every conversation — memorize those first.

Cycle	A 28-day run for a client. Each cycle has its own budget, goal, and end date.
Active Cycle	The cycle that's happening right now.
Health Score (HP)	A 0-to-100 rating for a client. The one number you glance at to see if they're in trouble.
Fatigue Score (FTG)	How tired the audience is of the ads. High = they've seen it too many times and are tuning out.
OSA %	Out of Service Area lead %. The share of leads that came in but live outside the client's service area — we can't serve them. High OSA means we're spending money on leads that will never book. Fix the targeting map when you see this.
Greg	Our auto-buyer. He watches CPC and CPL. When costs get too high, he either pauses the ad (HARD), pings Slack (SOFT), or does nothing (OFF).
CPC	Cost per click. What we pay every time someone clicks the ad.
CPL	Cost per lead. What we pay for each lead that comes in.
CPA	Cost per appointment. What we pay for each booked appointment. This is the one clients care about most.
L2B	Lead-to-Booked rate. What % of leads turned into appointments. Measured over 45 days in most places.
Booked Goal	How many appointments the client wants this cycle.
CPA Goal	The most the client is willing to pay for one booked appointment.
Good to Bill	A flag on a cycle meaning: the numbers are final, send the invoice.
Pod	An internal team or grouping of clients. Each client belongs to a pod based on their manager.
Frequency	How many times the average person has seen the ad. Over 2.5 means they're seeing it too much and the ad is getting stale.

13 Common workflows — quick reference

A cheat sheet for when you forget where something lives. Scan it, skim it, bookmark it.

Start a new client	Manage → Clients tab → New Client . Name, manager, ad account ID, booked goal, daily budget, start date.
Add a new cycle to a client	Open the client → Add Cycle . Set daily budget and booked goal. Other numbers carry over from the last cycle.
Change a client's ad account ID	Open the client → Change Meta ID . Leave the default toggle on ("current cycle and forward") unless the old ID was wrong from day one.
Move a client to a different manager	Manage → Clients tab → Transfer . Pick the new manager and save.
Pause a bad ad	Open the client → scroll to the ads grid → click the pause toggle on that ad's row. Confirm.
Mark a cycle ready to invoice	Open the client → scroll to Cycle History → flip Good to Bill . The billing admin gets a Slack ping.
See what still needs to be invoiced	Sidebar → Billing Tracker → "Ready to Bill" section.
Run an ad-hoc report for one manager	Sidebar → Automations → find the manager → click Audit, Pace, Greg, or Cycle Warnings.
Stop one manager from getting one type of alert	Sidebar → Automations → flip that column's toggle off for that manager.
Find a client fast	Sidebar → Quick Jump . Type the name and pick. Faster than clicking through.
Reset your daily focus queue	Sidebar → Productivity Mode → Reset Queue .
See why a client looks unhealthy in the dashboard	Open the client → read the Track Status banner → scan the five KPI cards → open the ads grid to see which ads are behind the numbers.
Verify a number when the dashboard looks off	Open Meta Ads in another tab and check the same number there. Meta is the source of truth for spend, impressions, clicks, and ad status.

Force the dashboard to load fresh data

Sidebar → **Refresh Data**. If that's not enough, hard-refresh the browser (Ctrl+Shift+R).

One last thing. The Command Centre is here to make you faster — it's not a replacement for your judgment. Red banners and low scores are prompts to investigate, not orders to act. When in doubt — especially on offboarding, pod changes, and ad account ID swaps — ask your lead first. It's easier to not make a mistake than to undo one.

Welcome to Rooflgnite. Let's go.
